

# Webtool Final Project

Peichun Tseng

## Export Company System

### Summary of project/ description of the roles

The purpose of this project is how to have a lower cost of Export company.

This final project has three important roles, that are Shipping company,

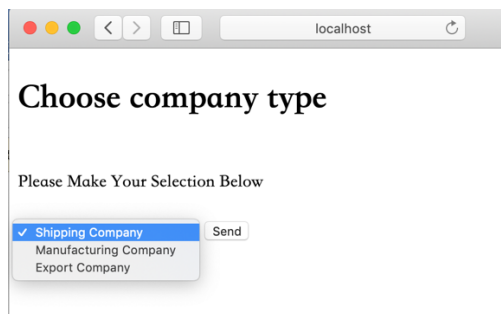

Manufacturing company and Export company, which is the most essential role here.

Manufacturing company can make the product list in the website and store these information in database. Shipping company also can input shipping information, like destination and price to the website, and store data in the database. Every employee in Export company can set their own username and password, and each one is responsible for a country, they can decide which Manufacturing company and Export company can have lower cost overhead.

### Summary of the Functionality Performed/Screenshots
